MAIN BUILDING—FRONT VIEW.

CALENDAR FOR 1910-11.

The session will begin Wednesday, September 14, 1910, and close Tuesday, May 23, 1911.

TERMS.

First Term will begin Wednesday, September 14, 1910.

Second Term will begin Wednesday, December 7, 1910.

Third Term will begin Wednesday, March 1, 1911.

COMMENCEMENT EXERCISES, MAY, 1911.

Saturday, May 20, 4:00 p. m.—Alumni Business Meeting.

Saturday, May 20, 8:30 p. m.—Alumni Address.

Sunday, May 21, 10:30 a. m.—Baccalaureate Sermon.

Monday, May 22, 10:00 a. m.—Joint Exercises Young Men's Literary Societies.

Monday, May 22, 8:30 p. m.—Senior Class Exercises.

Tuesday, May 23, 10:00 a. m.—Commencement Day Address; Awarding Diplomas and Certificates.

Students may enter at any time and receive credit for work completed. Attendance for at least a half session or its equivalent is required for a certificate, and for a full session or equivalent for the diploma.

Certificates and diplomas are not awarded on examination alone. Actual work done in the classes of the school is the basis of all certificates issued by the institution.

STATE BOARD OF EDUCATION.

HIS EXCELLENCY T. M. CAMPBELL,
Governor and Ex-Officio President.

HON. J. W. STEPHENS,
Comptroller of Public Accounts.

HON. W. B. TOWNSEND,
Secretary of State.

Secretary of the Board.

HON. F. M. BRALLEY,
State Superintendent of Public Instruction.

LOCAL BOARD OF DIRECTORS.

HON. EMORY C. SMITH, CHAIRMAN.

HON. ALVIN C. OWSLEY, TREASURER.

HON. J. T. BOTTORFF, SECRETARY.

FACULTY.

W. H. BRUCE, PRESIDENT,

(A. B., Alabama Polytechnic Institute; A. M., Baylor University; Ph. D., Mercer University.)

Science of Education.

W. D. BUTLER,

(A. B., Bethel (Ky.) College, 1884, A. M., 1887.)

Mathematics.

L. D. BORDEN,

(B. S., Southwestern University; A. B., University of Nashville.)

Physics.

W. N. MASTERS,

(A. B., B. S., National Normal of Ohio.)

Chemistry and Physiology.

T. E. PETERS,

(A. B., Greenville (Ky.) College, 1889, A. M., 1892.)

Mathematics.

J. HENRY PHILLIPS,

German and Education.

J. R. SWENSON,

(A. B., University of Denver; A. M., University of Texas.)

Civics and Education.

P. E. McDONALD,

(A. B., University of Nashville.)

Latin.

E. D. CRIDDLE,

(B. Lit., University of Texas.)

History and English.

C. L. DAVIS,

(B. S. A., University of Tennessee.)

Agriculture.

J. W. SMITH, SECRETARY-TREASURER,

Assistant in Mathematics.

MISS EMMA MITCHELL,

History.

MISS ANNIE WEBB BLANTON,
(B. Lit., University of Texas.)
English.

MISS M. ANNE MOORE,
(M. L., Southwestern University; A. B., Chicago University.)
Psychology and Method.

MISS EDITH LANIER CLARK,
(A. M., University of Texas.)
Literature.

MISS MARGARET MANORA BOYLAN,
(New England Conservatory.)
Music and Reading.

MISS ELIZABETH ALGER HILLYAR,
(Woman's Art School of New York.)
Drawing.

MRS. HAYDN LEWIS,
Assistant in History.

J. H. LEGETT,
(North Texas State Normal College.)
Assistant in Natural History.

CLARENCE A. TRIPP,
(Michigan Central Normal School.)
Manual Training.

MISS LENA BUMPAS,
(College of Industrial Arts of Texas.)
Domestic Science.

MRS. PEARLE CARDEN McCracken,
(Glasgow (Ky.) Normal School.)
Librarian.

NORTH TEXAS STATE NORMAL COLLEGE

HISTORY.

By an act approved March 31, 1899, the Twenty-sixth Legislature created the "North Texas State Normal College," located at Denton, and authorized the State Board of Education to operate and control it.

The Twenty-seventh Legislature having by an act approved February 18, 1901, provided for the maintenance and support of the school, the State Board of Education in June, 1901, elected a President and a Faculty, and the school opened September 18, 1901.

PURPOSE.

The school is maintained for the purpose of training and educating persons in the science and art of teaching.

The distinguishing characteristic of a normal school is the fact that, in addition to an academic course, it offers instruction in the principles that underlie all education.

DENTON.

Denton, the county seat of Denton county, has a population of more than six thousand. It is on the lines of the T. & P. and the M., K. & T. Railroads, 37 miles from Dallas and 35 miles from Fort Worth. Fourteen daily passenger trains render Denton readily accessible from all sections of the State.

Denton has a modern system of electric cars, free mail delivery, and two telephone exchanges. The city owns and operates its own electric light, water and sewer systems, all of which are efficient and modern in construction.

GROUNDS AND BUILDINGS.

The Normal campus occupies a beautiful well-shaded plat of ten acres about one mile from the union depot station. The electric cars run from the railroad station to the grounds.

The main building, erected in 1903, contains on its three floors the offices, recitation rooms, auditorium, library, and cloak rooms.

All recitation rooms are 40x25 feet. The auditorium is 98x76 feet, having a seating capacity of 1200.

The building is equipped with steam heat, electric lights, and sani-

tary sewerage, and the office has telephone connection with all sections of the State.

The Thirty-first Legislature made an appropriation for the construction and equipment of a science building, which is now in process of erection. This fireproof, three-story building, supplied with all modern conveniences, chemical and physical laboratories, appliances for manual training and domestic science, will be completed before the beginning of the session in September, 1910.

COURSES OF STUDY.

The entire instruction given by the Normal embraces three annual sessions of thirty-six weeks or nine scholastic months each. The first year is designated as the Freshman, the second as the Junior, and the third as the Senior year. Each annual session is divided into three terms of twelve weeks each.

Each year requires of the student eight and one-third units or "courses." A *course* means work in some subject equivalent to three recitations per week for thirty-six weeks—108 recitations in all—hence one-third course means 36 recitations, two-thirds course means 72 recitations, etc.

The courses required of all students are said to be *prescribed*; those from which the student may choose the number required are said to be *elective*.

FRESHMAN CLASS.

Prescribed—

Arithmetic, $\frac{2}{3}$ course.

Algebra, $\frac{2}{3}$ course.

English Grammar, $\frac{2}{3}$ course.

Composition, $\frac{2}{3}$ course.

United States History, 1 course.

Physical Geography, $\frac{2}{3}$ course.

Physiology, $\frac{2}{3}$ course.

Methods, $\frac{1}{3}$ course.

Music, Reading, and Drawing, $\frac{2}{3}$ course (i. e. $\frac{1}{3}$ course each in any two of the three).

Total, 6 courses.

Elective—

Agriculture, $\frac{2}{3}$ course.

Latin, 1 course.

Literature, 1 course.

Music, Reading, or Drawing, $\frac{1}{3}$ course.

Manual Training, $\frac{2}{3}$ course.

Domestic Science, $\frac{2}{3}$ course.

Total, $4\frac{1}{3}$ courses, from which to elect $2\frac{1}{3}$, which added to the 6 prescribed courses, make $8\frac{1}{3}$ courses required

JUNIOR CLASS.

Prescribed—

Algebra, $\frac{2}{3}$ course.

Plane Geometry, 1 course.

English Grammar, $\frac{2}{3}$ course.

Composition, $\frac{2}{3}$ course.

General History, 1 course.

Psychology, $\frac{2}{3}$ course.

School Management, $\frac{1}{3}$ course.

Music, Reading, and Drawing, $\frac{2}{3}$ course (i. e. $\frac{1}{3}$ course each in any two of the three).

Total, $5\frac{2}{3}$ courses.

Elective—

Agriculture. $\frac{2}{3}$ course.

Physics, $1\frac{1}{3}$ courses.

Latin, $1\frac{1}{3}$ courses.

German, $1\frac{1}{3}$ courses.

Civics, $\frac{2}{3}$ course.

Manual Training, $\frac{2}{3}$ course.

Domestic Science, $\frac{2}{3}$ course.

Music, Reading, or Drawing, $\frac{1}{2}$ course.

Total, 7 courses, from which to elect the additional $2\frac{2}{3}$ courses to make the $8\frac{1}{3}$ courses required.

SENIOR CLASS.

Prescribed—

Mathematics, $\frac{2}{3}$ course (either Solid Geometry or Trigonometry).

Literature, $1\frac{1}{3}$ courses (English, 1 course; American, $\frac{1}{3}$ course).

Education, $1\frac{1}{3}$ courses.

Music, Reading, or Drawing, $\frac{1}{3}$ course (i. e. $\frac{1}{3}$ course in any one of the three).

Total, $3\frac{2}{3}$ courses.

Elective—

Agriculture, 1 course.

Mathematics, $\frac{2}{3}$ course.

History, $1\frac{1}{3}$ courses (English, $\frac{2}{3}$; Modern, $\frac{2}{3}$).

Chemistry, $1\frac{1}{3}$ courses.

Botany, 1 course.

Latin, $1\frac{1}{3}$ courses.

German, $1\frac{1}{3}$ courses.

Music, Reading, and Drawing, $\frac{2}{3}$ course.

Manual Training, $\frac{2}{3}$ course.

Domestic Science, $\frac{2}{3}$ course.

Total, 10 courses, from which to elect the additional $4\frac{2}{3}$ to make the $8\frac{1}{3}$ courses required.

ENGLISH.

FRESHMAN YEAR.

Grammar I, $\frac{2}{3}$ course (prescribed).

This course offers a thorough review in elementary English Grammar. The work begins with sentence analysis, which is continued in connection with a detailed study of the various parts of speech—their classification, inflections, constructions, and parsing. The principles governing correct expression are made clear through numerous exercises in which the student is required to apply them. This work is planned especially to aid the teacher of language and grammar in the intermediate grades.

Composition I, $\frac{2}{3}$ course (prescribed).

This is a practical course in elementary composition, including a careful study of the paragraph, of letter-writing, and of punctuation. The principal ends to be attained by this work are clearness of expression, and correctness of form. In addition to exercises in punctuation, the student is required to write a number of short compositions—chiefly paragraphs and letters, which, besides affording him practice in writing, are used also as a basis for class-room criticism and discussion.

JUNIOR YEAR.

Grammar II, $\frac{2}{3}$ course (prescribed).

The second year's work in Grammar consists chiefly of a comprehensive course in sentence analysis, including the analysis of very difficult and complicated selections. The course includes a detailed study of the dependent clause, of the participle, the infinitive, and the gerund. The work of the previous year is reviewed, and each division of the subject is studied with regard to the most effective methods of teach-

ing it. This course should prepare the student to do efficient teaching in the grammar grades.

Composition II, $\frac{2}{3}$ course (prescribed).

Besides a review of the work of the Freshman year, this course consists chiefly of a detailed study of narration and description. In connection with this, the pupil studies the sentence, the paragraph, and the outline, putting into practice all principles learned. A brief study of words, of figures of speech, and of versification is also included. The pupil is required to write both short and long themes, and is expected to develop the ability to outline a subject in a logical way, and to write, not only correctly, but with ease and force. In the study of the paragraph, the chronicle, the incident, the simple and the complex story, and the different kinds of description, two English classics are used in each class, to furnish examples of these forms of composition, to afford models of style, and as sources from which are drawn some of the subjects for themes.

LITERATURE.

FRESHMAN YEAR.

American Literature, 1 course (elective).

This course offers a thorough study of the history of American Literature, together with a detailed study of at least two American classics. An attempt is made to awaken an interest in the study of literature and to cultivate a taste for good reading.

SENIOR YEAR.

Literature, $1\frac{1}{3}$ courses (prescribed). English, 1; American, $\frac{1}{3}$.

This course includes a study of the history of English Literature, emphasizing the development of English prose, the drama, the novel, and Romantic poetry, together with a detailed study of the principal writers, their biographies and their works. This will be followed by a critical study of one of Shakespeare's plays, and a brief course in American Literature.

There will be required throughout the year critical essays and as much supplementary reading as the time will permit.

MATHEMATICS.

In all the work in Mathematics three ends will be kept constantly in view: first, to prepare teachers of the subject; second, to secure mental discipline and culture in the presentation of the subject; third, to make mathematics a ready and useful instrument.

FRESHMAN YEAR.

Arithmetic, $\frac{2}{3}$ course (prescribed).

The course in Arithmetic is intended to develop the reasoning powers of the student, to insure a grasp of principles, to secure rapidity and accuracy in calculation, to prepare for the subsequent work of the course in mathematics, and for practical business transactions.

Algebra I, $\frac{2}{3}$ course (prescribed).

An effort is made to present Freshmen Algebra in such a manner as to make the transition from definite or particular number to general number easy and by numerous illustrations to enable the pupil to grasp the meaning of negative number. The symbolism of Algebra will be noticed and frequent opportunities given to express symbolic language verbally. Type forms in multiplication and division will be stressed, opening the way to factoring. Emphasis will be placed upon factoring, and further stress given it in finding highest common factor, least common multiple, and in operations with fractions. The use of the graph will be stressed in the treatment of simultaneous linear and quadratic equations. The student will be expected to solve numerous problems for their cultural value. The Freshman course usually ends with the presentation of elimination and inequalities.

JUNIOR YEAR.

Algebra II, $\frac{2}{3}$ course (prescribed).

The work of the Junior year in Algebra begins with a review of the typical parts of the work done by the Freshman class in that subject. Using the three laws of positive integral exponents as a basis, the student is led to see the meaning of fractional, negative and zero exponents. Irrational, imaginary, and complex numbers are now added to the series of numbers previously given and the graph again helps in making clear the nature of these numbers. Another opportunity is found to stress factoring in the solution of affected quadratics. Simul-

taneous quadratics, series, logarithms and the other subjects usually given in a "Higher Algebra" then follow.

Plane Geometry, 1 course (prescribed).

The object of studying Plane Geometry is twofold: First, the unparalleled training it gives in logic; second, the content of its subject-matter, which is prized for its own sake like other forms of knowledge. Keeping these two objects constantly in view, the student will be required to be exact in stating definitions, axioms, and postulates. An effort will be made to have him forge an ideal chain of reasoning in the proof of every proposition. Attention will be given to the historical development of geometry as occasion may arise in connection with the regular work. Accuracy in drawing and neatness in arrangement of work will be required. Many original exercises will be given and every effort made to lead to perfect independence of thought, accuracy of expression, skillful reasoning, and integrity of character.

SENIOR YEAR.

Solid Geometry, $\frac{2}{3}$ course; Plane Trigonometry, $\frac{2}{3}$ course ($\frac{2}{3}$ course prescribed; $\frac{2}{3}$ course elective).

Solid Geometry continues the formal discipline offered by the study of plane geometry and affords a better field for the cultivation of the imagination. In the study of lines, planes, dihedral and polyhedral angles a constant demand is made upon the student's knowledge of plane geometry.

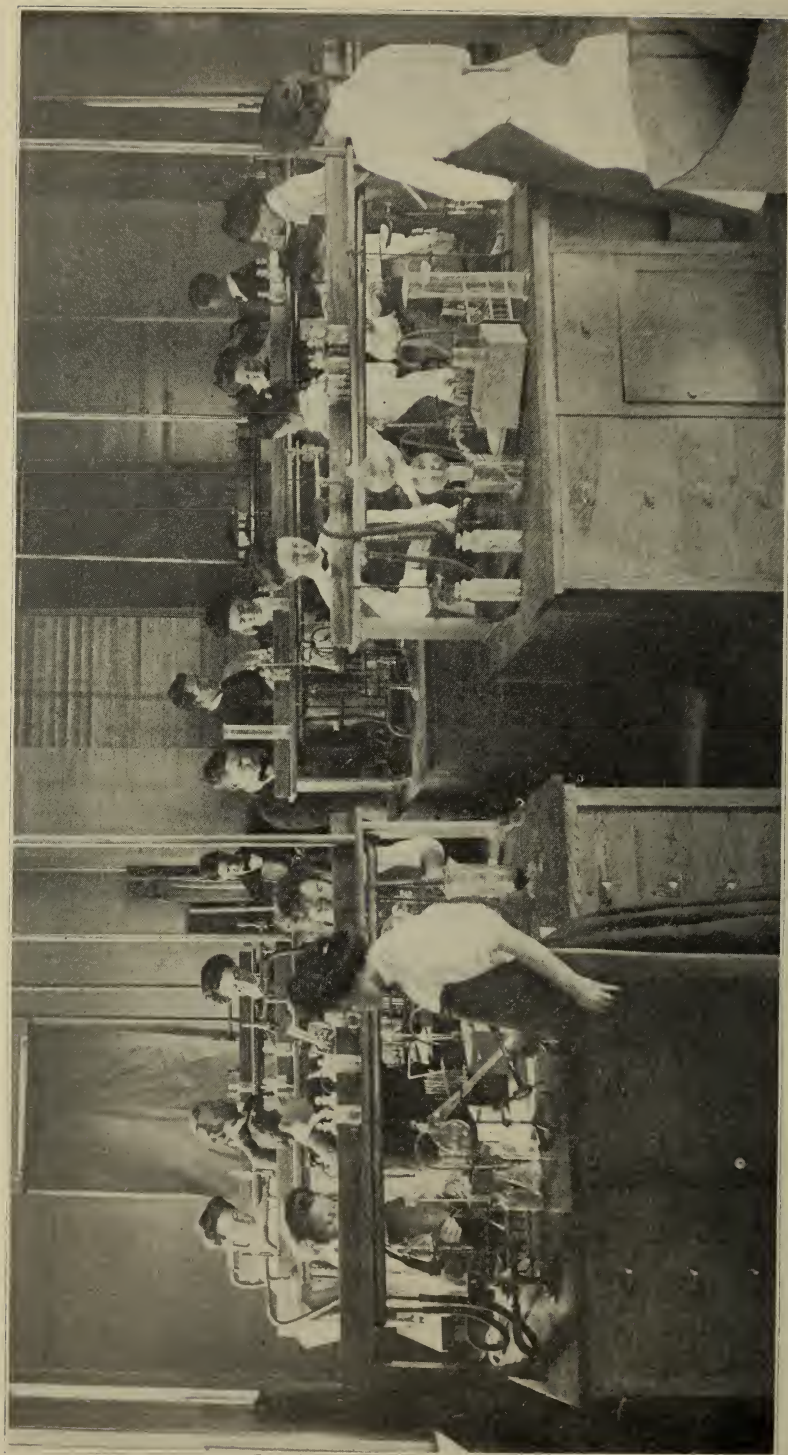

The course in Algebra prepares the way for Trigonometry. *General* definitions will be given from the beginning. The development of formulas and their application will constitute the main work of this course. Logarithms, although no part of the subject, are important in the solution of problems, and, for this reason, their treatment as presented in the algebra will be reviewed.

PHYSICS.

JUNIOR YEAR.

Physics, $1\frac{1}{3}$ courses (elective).

Laboratory work is now generally recognized as indispensable to an adequate course in elementary physics. The new Science Building will

CHEMICAL LABORATORY

be completed before the beginning of the ensuing session, and it will be equipped with necessary apparatus for a thorough course in laboratory physics. The aim of the work will be to make a helpful and inspiring study of physical phenomena, to the end that the student may know not only the *how much*, but also the *how* and the *why* of numerous expressions of physical laws and principles.

Note-books will be required in which each student will record preliminary observations and computations, and also an orderly statement of results and conclusions, but the real study of Physics will not be sacrificed to the fetish of note-book making.

Class room and lecture demonstrations of important physical laws will continue to be a feature of the instruction, with appropriate problems and exercises for testing the student's grasp and power to apply principles learned.

The aim of instruction in the course is threefold: (1) To secure accurate *knowledge* of the laws and principles. (2) To develop *power* to reason logically from specific facts and to general principles. (3) To give the student *skill* in the art of presenting thoughts, or in demonstrating propositions in the clearest manner.

CHEMISTRY.

SENIOR YEAR.

Chemistry, $1\frac{1}{2}$ courses (elective).

The course in this subject covers one full year, with time about equally divided between recitation and the laboratory. In the recitation, the purpose is to secure a clear and accurate knowledge of the subject as far as possible in a one-year course, special attention being given to the preparation and chemical properties of the more common elements and compounds, and to the laws and general principles in accordance with which chemical combinations occur.

In the laboratory, the student witnesses before his own eyes and under his own manipulation the various chemical reactions that illustrate the general laws of combination and dissociation. A note-book in which the student records and explains as far as possible all phenomena observed is kept and regularly graded by the instructor.

The first half-year will be devoted to the study of the nonmetallic elements, including the statement and study of the atomic theory, of electrolytic dissociation, reversible reactions, and chemical equilibrium;

the second half-year to the metals, their useful compounds, modern methods of reduction, and some simple organic compounds familiar in every-day life.

In addition to the three hours per week of recitation provided in the curriculum, two hours per week will be devoted to laboratory work.

A laboratory fee of \$2.00 to cover the use of material and ordinary breakage will be charged all students taking this course.

BOTANY.

SENIOR YEAR.

One course (elective).

This course is designed to give the student a fair knowledge of the elements of Botany, with its practical application to agriculture.

1. *Structural Botany*.—This includes the physiology of plant life in general, viz.: The study of protoplasm, cell content and structure, absorption, diffusion, root pressure, transpiration, respiration, photosynthesis, nutrition, growth, and tropism.

By actual experiment and observation the student gains a correct conception of how plants breathe, build up their intricate structures, and complete their life cycle.

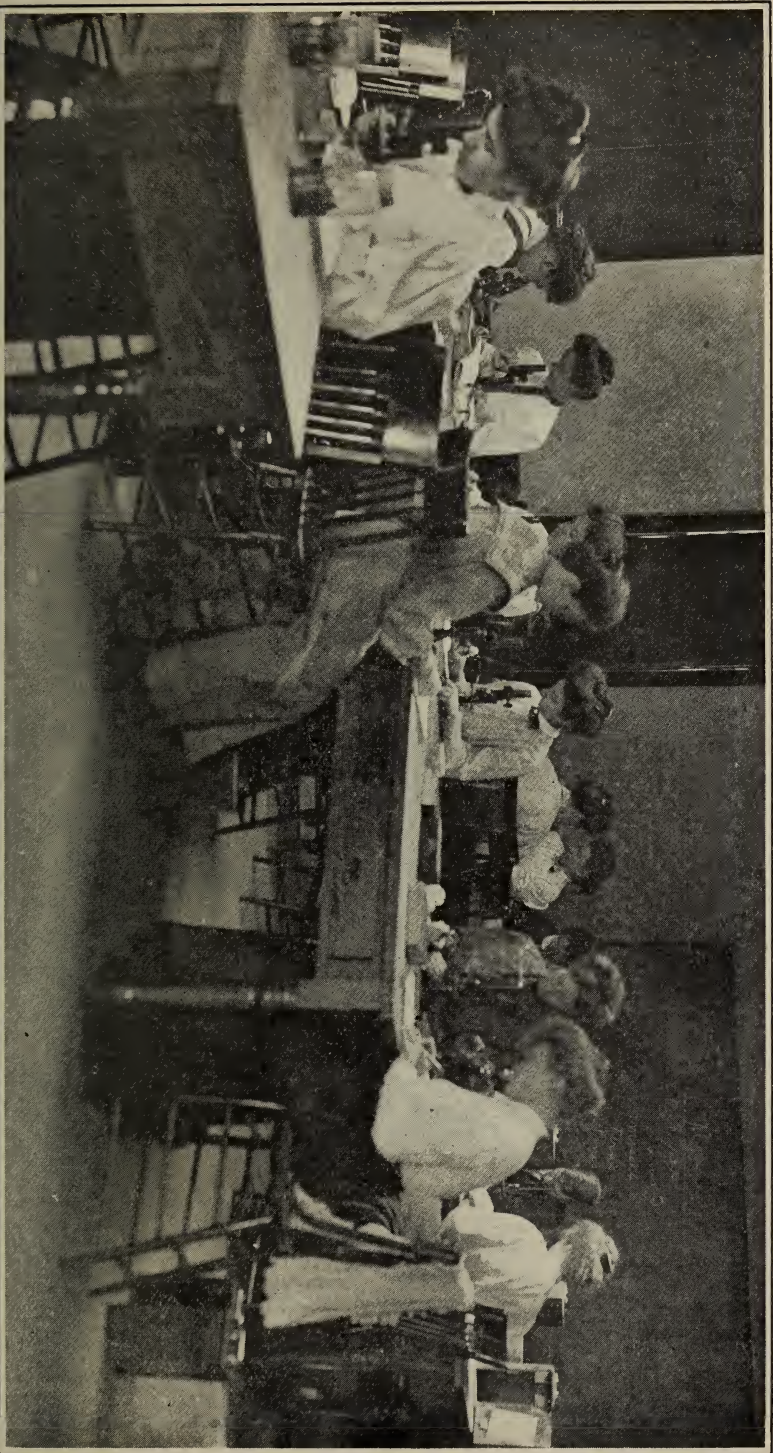

2. *Cryptogamic Botany*.—This embraces a careful study in laboratory and field of typical forms of algæ, fungi, liverworts, mosses, ferns, and gymnosperms.

Special attention is given to the development in relative size and importance of the sporophyte and the gametophyte stages in each of the groups studied, and to the steps in the evolution from simple fruit bodies (spores) to the more complex fruits (seeds) of the higher groups of plants.

3. *Systematic Botany*.—This includes a study of the various parts, organs and functions of each organ of the flowering plants and the relationships of the main plant families to each other. The student learns to use the "key" in finding the names of our local flora.

Ecology.—This introduces the student to one of the most interesting, instructive and valuable divisions of botanical science; the study of nutrition, pollination, and seed distribution.

Laboratory and field work are required throughout the entire year. *Mere* text-book knowledge is *not* accepted. Each student is required to make a full series of drawings, notes, etc., of all plants examined and experiments performed. The drawings may be in hard pencil, crayon,

BOTANICAL LABORATORY.

or India ink; the notes must be in ink. All notes and drawings must be as neat and as accurate as possible.

The laboratory is fully equipped with wash basins, tables, compound microscopes, dissecting microscopes, microtome, slides, drop bottles, stains, etc.

Each student becomes familiar with the uses of these instruments, not by observation, but by actually using them. They are instruments capable of giving first-class service, and are in constant use every week by the students during the regular laboratory hours.

Two hours per week will be devoted to laboratory work, in addition to the two hours per week of recitation provided in the curriculum. A laboratory fee of \$2.00 to cover use of material, etc., will be charged students taking this course.

PHYSICAL GEOGRAPHY.

FRESHMAN YEAR.

Two-thirds course (prescribed).

In the treatment of this subject an effort is made to connect the cause of physiographic facts with their results upon the growth, distribution, and occupations of the human race. Constant reference is made to the best way of presenting the subject to young students, and the daily work is supplemented with careful study of topographic maps.

LATIN.

FRESHMAN YEAR.

Latin I, 1 course (elective).

The work included in the ordinary First Latin Book. Special attention given to the translation of English into Latin as a means of mastering the Latin.

JUNIOR YEAR.

Latin II, 1½ courses (elective).

Roman fables and stories, *Viri Romæ* and *Cæsar*. Translation of English into Latin based on the text of *Cæsar*.

SENIOR YEAR.

Latin III, $1\frac{1}{3}$ courses (elective).

First Half Year—Virgil's *Aeneid*, three books, with Prosody.

Second Half Year—Cicero, four orations, and Ritchie's Latin Prose.

GERMAN

JUNIOR YEAR.

German I, $1\frac{1}{3}$ courses (elective).

The first half year is devoted to the work usually covered by a First German Book. Students are required to learn the meanings and inflections of all words as they occur. The principles of every lesson are illustrated by the use of sentences from German into English and English into German, special attention being given to pronunciation and to idiomatic constructions.

By the beginning of the second half year students have mastered the general principles of the language sufficiently to read rapidly the following easy German classics: Heyse's *L'Arrabbiata*, Storm's *In St. Jurgen*, Hillern's *Höher als die Kirche*, Storm's *Immensee*.

SENIOR YEAR.

German II, $1\frac{1}{3}$ courses (elective).

Grammar and composition throughout the year along with the reading of the following texts: Schiller's *Wilhelm Tell*, Hauff's *Die Karavane*, Lessing's *Mina von Barnhelm*, Eichendorff's *Aus dem Leben eines Taugenichts*.

CIVICS.

JUNIOR YEAR.

Two-thirds course (elective).

The work in Civics is elective for Juniors, and constitutes a two-thirds course with two recitations a week throughout the year. The subject is unified in treatment and purpose, but it is advantageous to make one change in the point of view. In the first part of the work

the facts of local and State government are organized about the needs, rights, duties, and interests of the individual citizen in a democratic community. Particular attention is given to the late reforms in political procedure, such as the commission form of city government and the direct primary, movements in which we see the principle of self-government feeling its way toward the success whereof it has so often fallen short. The second part of the work brings in the facts of the Federal government in connection with a study of the larger social, economic, and ethical problems that confront our nation today, and upon whose solution it depends whether a government like ours, based upon self-government and co-operation, can endure.

In both parts of the course the stimulation of intelligent interest in the great questions of the day is considered fully co-ordinate, as an aim, with the acquisition of facts. To this end, the interpretation of current events of national and international significance forms a regular exercise. For this feature the library makes ample provision in papers and periodicals, of which the students are expected to avail themselves. Two brief essays are required of each student during the year, in order to permit a somewhat more intensive study in some direction indicated by the student's interests.

HISTORY.

FRESHMAN YEAR.

History I. United States History, 1 course (prescribed).

Under this subject will be considered the early discoveries and explorations in America by European nations, the planting of English colonies, the relative claims of English, French and Indians to the country now known as the United States, with the struggles of each for supremacy, the separation of the English colonies from the Mother Country, the rise of a new nation in the civilized world, with its accompanying industrial, commercial, and political influence.

JUNIOR YEAR.

History II. General History, 1 course (prescribed).

The Junior year is devoted to the study of Ancient and Mediæval History. The first term a brief survey is taken of the nations that occupied the valley of the Nile, the Tigris-Euphrates basin and the

eastern shores of the Mediterranean Sea. Special attention is given to the contribution to civilization made by these nations.

Subsequently a somewhat fuller study is made of Greece—her political history and marvelous artistic and literary development.

The third and fourth terms of the Junior year are given to Roman and Mediæval History. In Rome we study the growth of a world empire and note the decay of a nation founded upon pure militarism.

The Mediæval period will comprise an account of the Teutonic migrations; the brief whirlwind of the Saracen conquest; the Empire of Charlemagne; the development of Feudalism; the Crusades; the struggle between the Empire and the Papacy; and influenced by all these elements, the rise of modern nations.

SENIOR YEAR.

History III, $1\frac{1}{2}$ courses; English, $\frac{2}{3}$; Modern, $\frac{2}{3}$ (elective).

The Senior year is devoted to the study of English and Modern History. In studying English History special attention is given to its political features—the struggle between the “divine right of Kings and the divine right of the people” and the gradual gain of power in the earlier centuries by the barons through the House of Lords; later by the people through the House of Commons. Attention is also drawn to the large space which the Church fills in the life of the English people.

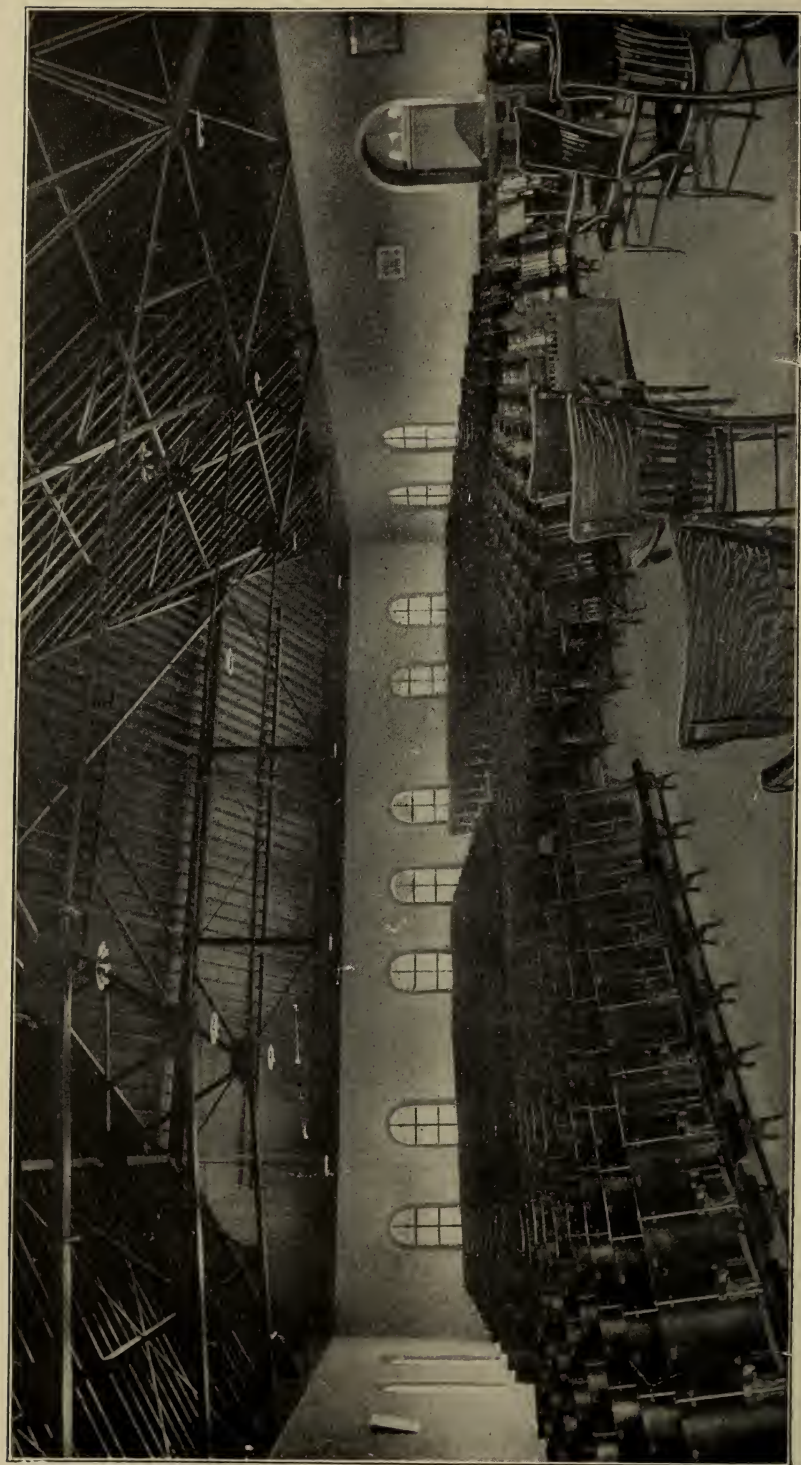

In Modern History we emphasize the Reformation, the rivalry of the Austrian and Spanish Hapsburgs with France, the rise of the Dutch Republic, of Russia, and of Prussia, and the French Revolution. In the French Revolution we rivet our attention, not so much on its destructive phase, which has absorbed the sympathy of the world for so many years, but rather on the infinitely more important phase, the constructive, to whose influence Germany and Italy are largely indebted for their first impulse toward nationality.

Throughout the Senior year special reading is required and papers on various historical subjects are from time to time submitted.

DRAWING.

The course extends throughout the Freshman, Junior, and Senior years. One-third course each year (elective).

The introduction of music, manual training, domestic science, nature study, etc., into the schools have all led the way to a fuller recognition of art as an important feature of public education, both for the proper

AUDITORIUM—SEATING CAPACITY 1200.

development of the child and as a preparation for practical social life.

The chief object throughout the course will be to make the work practical and adaptable to any school in which the students may be called to teach, and to cultivate the æsthetic taste and appreciation of the beautiful.

The course is as follows: Free-hand drawing of subjects from nature, flowers, plants, etc., still-life study, mechanical drawing, lettering, elements of perspective, elements of design, construction and color.

Materials used: Water color, dry color, brush and ink, charcoal, pencil, scissors, ruler, and compass.

VOCAL MUSIC AND READING.

The course in both these subjects extends throughout the three years. One-third course each year (elective).

Although a certain amount of technical knowledge is absolutely necessary for the intelligent pursuit of any subject, the culture value is deemed far more important. The primary aim in the Department of Music is to create and encourage a love for good music through the study of songs which will lead to a proper standard by which to judge the merits of a composition, and also serve as a basis for technical study.

The technical problems in rhythemics, melodies, and dynamics are made a matter of much individual attention and drill, and a certain amount of original work is required in order to test the student's grasp of the mechanical part of the subject.

The Treble Clef Club and Glee Club offer opportunities for those interested in interpretation and execution of some of the standard works which can not be attempted in class.

In Reading the aim is to beget a love for good reading and speaking. Correct oral expression, not elocutionary affectation, is the purpose in mind. The course includes studies by the best authors of the development of expression, readings from standard classics, as well as original work in the form of debates and extemporaneous speaking.

In both departments attention is given to correct breathing, voice production, and bodily poise. Both courses are designed to be practical, so that the student not only "learns to do by doing," but at the same time gains some knowledge of the theory and art of teaching the subjects in the public schools.

PHYSIOLOGY.

FRESHMAN CLASS.

Two-thirds course (prescribed).

This subject will be presented first as a phase of biology, laying especial stress upon the explanation of physiological processes, and teaching the universal application of these processes to all living matter.

A sufficient amount of anatomy will be given to enable the student to understand the physiology upon which most of the hygiene is based. No time will be spent in learning meaningless words, nor in "playing at" the study of microscopic anatomy or histology. Only so much of histology will be touched upon as seems necessary to correlate properly human physiology with other biological sciences.

The chief effort will be to enable the student to understand the relation of the facts of anatomy and physiology to the great laws of health and to apply them to daily living.

A knowledge of microbes is considered of vast importance. These infinitely small forms of life are the greatest enemies of the human race. Microbic or infectious diseases, their cause, spread, and prevention will be carefully taught, both from the standpoint of personal hygiene and from that of domestic and public sanitation.

AGRICULTURE.

Course during each of the three years. Two-thirds in Freshman, $\frac{2}{3}$ course in Junior, 1 course in Senior year (elective in each).

One of the results of the increased cost of living is the demand for more scientific agricultural methods. These improved methods can be best brought to the attention of the public through the schools. Several States have already placed in their schools courses designed to train our future farmers.

The purpose of this course is, first, to enable the teacher to meet the increasing demand for elementary agriculture and, secondly, to arouse an interest in everything growing about us, since these things constitute so large a part of our environment.

The course will include a study of the origin and formation of soils, soil texture, tillage, and moisture, the propagation of plants, the making of seed beds, the making of meadow for pasture: forage crops, the

best known breeds of horses and cattle, with their care and feeding; the care and preservation of milk; bacteria and their relation to life.

Practical work in garden-making will be given during the spring months. The experimental farm belonging to the school and the farms in the vicinity of the school will be used to illustrate the different methods of tillage.

PROFESSIONAL WORK.

Every department of the school is, in some measure, a professional school, each subject being taught in the light of the best method of its presentation, the fact that the class is composed of future teachers being kept constantly before the instructor. Special emphasis is given to method, psychology, the theory of education in its various phases, in the strictly professional department.

FRESHMAN YEAR.

Primary Method, $\frac{1}{2}$ course (prescribed).

In this course the similar aspects of the fundamental principles of teaching will be given. The problems of lesson assignment, of the steps of the recitation, the use and the limitation of objective teaching, of the inductive and the deductive principles will be presented in simplified form. So far as possible the work will be concrete.

JUNIOR YEAR.

Psychology, $\frac{2}{3}$ course (prescribed).

This course is designed to cover the fundamental principles of psychology and their application to the science of teaching. The aim is to place such emphasis upon the conditions of development of the physiological and the mental functions that the student may be led to an understanding of such psychological truths as are necessary to an intelligent comprehension of the principles of scientific pedagogy. Exercises and individual topics are assigned for special study.

Class Room Management, $\frac{1}{3}$ course (prescribed).

The class room is considered the unit of educational system. The problem—fundamentally one of economy—will have to do with the effective training of children in the mass.

Social efficiency, the ultimate aim of education, will be kept constantly in view; and the entire subject will be treated from the standpoint of preventing waste in attaining this end. The factors of the process fall easily into two classes, routine and judgment factors. Of the former, mechanical processes, the daily program, attendance, hygienic conditions, order, discipline and penalties; of the latter, attention, technique of instruction, testing results, disposition of the teacher's time, the teacher's relation to his co-laborers and to school officers, and the ethics of schoolcraft will be presented in such way as to provoke thought and inspire independent investigation and accomplishment.

It is not the purpose of this department to write prescriptions for the use of all pupils under all varieties of circumstances and conditions; rather is it to broaden and strengthen them, to make them independent of the school—to enable them to stand alone.

SENIOR YEAR.

The professional work of the Senior year is varied. It prescribes $1\frac{1}{2}$ courses. Among the four different subjects, phases, or points of view, from which the study of education may be undertaken, the student selects two, and only two. Education I, History of Education, $\frac{2}{3}$ course, by Prof. Phillips; Education II, Method in Education, $\frac{2}{3}$ course, by Miss Moore; Education III, Science of Education, $\frac{2}{3}$ course, by President Bruce; Education IV, Organization and Administration in Education, $\frac{2}{3}$ course, by Prof. Swenson.

Education I, History of Education, $\frac{2}{3}$ course.

This subject will be treated as a phase of General History—one of the lines of intellectual growth—and not as a disconnected jumble of educational efforts with no logical sequence and no rational development from the lives of people.

Changing ideals will be studied and compared, type-studies will be considered, discrimination of essentials in the development of the science of teaching will be encouraged, and the contributions of great reformers, nations and ages will be carefully studied and interpreted in the light of modern educational endeavor.

Education II, Method in Education, $\frac{2}{3}$ course.

This is a course in general methodology, presenting the fundamental principles that control successful teaching so far as they are deducible from psychological laws. A close examination is made of, and em-

phasis placed upon, the principles of apperception, association, and self-activity; the individual difference of children; of motor expression, verbal expression, and expression through the arts and industries; the inductive and deductive methods of teaching; the scientific method of the recitation; of teaching form and teaching execution; careful investigation of every-day problems that confront the teacher in the presentation of class work; of the child and his environment; and of the teacher and his qualifications.

It is the purpose of this course to make a critical study of the methods of presenting the principal subjects in our public school course. The student is led to test methods and to note their close relation to the laws of the mind. Some time is given to the study of the modern devices and plans for work now used in the more progressive schools of the country.

Education III, Science of Education, $\frac{3}{4}$ course.

This course undertakes to study the meaning of education, a comparison of educational ideals of different ages, races, nations and educational thinkers, the elements of the curriculum, the theory of equivalence, etc.

Among the topics carefully considered are The Aim of Education, Educational Values, Educational Agencies, The Basis of Education, The Doctrines of Interest and Effort, of Discipline and Development, Vocational and Avocational Training, the so-called liberal and the practical education, etc.

Education IV, Organization and Administration in Education, $\frac{2}{3}$ course.

EDUCATIONAL ADMINISTRATION.

It is proposed to make this an advanced course in school management. While the usual problems will be dealt with, it is intended that the treatment follow other than the traditional lines. The actual teaching process will not be touched upon, but the conditions upon which its success depends, including the study period and the play hour and the child's out-of-school occupations will be studied. The point of view taken will be the social and ethical one, rather than the psychological or the philosophical. The development of school management will be traced from "running" the school and "keeping" the school, through teaching the school, to the modern conception of the school as a necessary form of life in a civilized community, a "living" of the school by

teacher and pupils together. Particular notice will be given to those late developments of education by means of which the welfare of the individual is conserved conjointly with the advantage of the group. A special point will be made of the working together of pupils, teachers, and supervisory officers in a city or county system, in which the mutual improvement by continuous interaction of all three factors is the only certain guarantee of progress. Finally, an outward and a forward look upon school organization will be helpful to all who expect to be permanently interested in education.

Dewey's "Ethical Principles Underlying Education" will serve as a basis for the discussions in a part of the course.

MANUAL TRAINING.

This course is to constitute one of the distinctive features of school. The object of the work is, like that of the other studies, educational. While it has a distinctive practical value, it possesses the dignity of laboratory training, and holds equal rank with other subjects. The processes involved in planning a piece of work and carrying it through the different steps from the mechanical drawing to the finished product bring into exercise some of the very best powers of both mind and hand. These exercises probably cultivate more faculties of the mind and body than any other work in the school. There is a constant adaptation of means to ends, calling for the joint exercise of both mind and body.

By careful supervision of the instructor, economy of time, labor, and material will be enforced, while special attention will be given to the formation of habits of neatness, accuracy, and to the best methods of presenting the subject.

The rapid and widespread introduction of manual training and domestic science into our public schools is everywhere a noticeable feature of modern education, and the present demand for well-prepared and competent teachers of these is far greater than the supply. With our new building and good equipment, the North Texas State Normal College is prepared to give first-class instruction in manual training.

Elective courses are offered in each of the three years. These courses will include mechanical drawing, joinery and bench work, cabinet work, turning, elementary handwork, theory and organization of manual training, and history of manual training.

Mechanical Drawing.—This course will include free-hand lettering

and will enable the student to acquire (a) proficiency in the use of drawing instruments, (b) knowledge of the conventions and methods in drafting room practice, (c) acquaintance with elementary geometrical constructions, (d) an understanding of orthographic projection and its development, and (e) ability to make working drawings of shop models.

Joinery and Bench Work.—This course will include a study of the various woods throughout the year, a study of the forms of joinery and their uses, the processes involved in making them, and the application of these processes in pieces of the pupil's selection and design. The course is so arranged that it will familiarize the student with each of the various tools in the set with which he is intrusted. Short talks will be given on staining, filling, and shellacing, and also on the nature of each new tool employed, with instructions as to grinding and care to be given it.

Cabinet Work.—This course consists of instruction in the application of the forms of joinery to the making of furniture, tool chests, cabinets of different kinds, and general interior finish by means of bench and mill work, and discussions of the problems of the cabinet maker.

Wood Turning.—This course covers exercises planned to give the student familiarity with both turners' and pattern makers' work, and introduces power machinery. Attention is given to the correct position of the body, manner of holding the tools, correct use of tools, methods of sharpening, and dangers to avoid. The course includes spindle, face-plate, and chuck turning, fitting, and polishing.

Elementary Hand Work.—This course consists of thin wood construction for the children of the fourth and fifth grades. The child's interest, the possible correlation, and the materials and equipment are considered. (a) Cardboard construction adapted to the children of the fifth and sixth grades. This consists of a series of lessons in construction suitable to this medium, beginning with the simple patterns and ending with elementary bookbinding.

History of Manual Training.—This course consists of a brief study of the educational theory and practice of Pestalozzi, Froebel, and other educational reformers, educational hand work in European countries, the development of manual training, art instruction, and industrial education in the public schools of the United States. The course will consist of lectures, discussions, and the preparation of papers.

Organization of Manual Training.—This course covers the development of manual training in the United States, with reference to similar development in foreign countries; organization of manual training in

the different kinds and grades of schools, principles of psychology applied to manual training; methods of teaching; study of each of the vital elements in each of the lines of work taught in the elementary and secondary schools; study of equipments; planning of equipments in detail to meet given conditions; economic and engineering problems arising in the planning of manual training equipments. Lectures, discussions, reading, written work, and a thesis will be required at the end of the course.

FRESHMAN YEAR.

Manual Training I, $\frac{2}{3}$ course (elective).

Mechanical Drawing, Bench Work.

JUNIOR YEAR.

Manual Training II, $\frac{2}{3}$ course (elective).

Mechanical Drawing, Cabinet Work.

SENIOR YEAR.

Manual Training III, $\frac{2}{3}$ course (elective).

Cabinet Work, Turning, Elementary Hand Work, History of Manual Training, Theory and Organization of Manual Training.

DOMESTIC SCIENCE.

This course is planned to give a general knowledge of foods and their preparation, and to show the place of Domestic Science in our public schools.

FRESHMAN YEAR.

Domestic Science I, $\frac{2}{3}$ course (elective).

Elementary cooking, study of the properties of food; the properties of food principles; the effect of heat upon them; the economic selection and preparation of food.

JUNIOR YEAR.

Domestic Science II.

A continuation of food study; proper food combinations; serving meals; household hygiene and practical housekeeping.

SENIOR YEAR.

Domestic Science III.

This course covers the fundamental principles of dietetics, including the balanced meal, the diet in growth, in health, and in sickness. The laboratory work of this course will be based upon the work of the previous courses. Special attention will be given to the meaning of this work in the public schools, including the equipping for domestic science.

CONDITIONS OF ADMISSION.

Age.—An applicant for entrance to any class of the Normal must be at least 16 years of age at the beginning of the annual session; that is, on September 14, 1910.

Qualifications.—Applicants for admission to the Freshman class should have a fair knowledge of the elementary branches, as spelling, reading, descriptive geography, elementary arithmetic, English grammar, history of the United States; and Texas history. Applicants for entrance to the Junior class should have a fair knowledge of the subjects required for admission to the Freshman class and of the subjects pursued by students in the Freshman year. Applicants for admission to the Senior class should meet the requirements for entrance to the Junior class and have also a fair knowledge of the subjects in the course of study required of the Junior class.

MODES OF ADMISSION.

Admission is by certificate or examination. A second grade teacher's certificate admits one to the Freshman class and a first grade certificate to the Junior class without examination. A diploma from a high school affiliated with the University of Texas admits one to the Junior class without examination. Certificates from any one of the State normal schools are fully recognized and those having them are entitled to entrance to the next higher class above those leading to such certificates.

Applicants for entrance to the Freshman class will be examined in Spelling, Writing, Descriptive Geography, History of Texas, Elementary English Grammar, Arithmetic (to percentage).

Applicants for entrance to the Junior class will be examined in Spelling, Arithmetic, Algebra (through simple equations), English Grammar, Composition, History United States, Physical Geography, Physiology, Methods and Management.

Applicants for entrance to the Senior class will be examined in English Grammar, Composition, Algebra, Plane Geometry, General History, Psychology, Methods and Management, and also in any three of the following that they may elect: Agriculture, Civics, Physics, Latin, German.

Applicants for entrance to the Junior or the Senior class may defer their examinations in Methods and Management and Psychology and opportunity will be given them during the session for removing any conditions or deficiencies in these subjects.

FEES.

Tuition is free to all students. An incidental fee of ten dollars (\$10) for the session is paid as follows: \$4.00 at the beginning of the session, \$3.00 at the beginning of the second term, and \$3.00 at the beginning of the third term of twelve weeks.

Students wishing the school to furnish all text-books used deposit a book fee of five dollars (\$5.00), two dollars of which is refunded upon the return of the books, leaving the cost of all text-books for the session \$3.00. These fees aggregating \$13 is the total cost of attendance for the session.

BOARD.

The School has no dormitory. More than sixty good boarding houses are in proximity to the Normal. Good board can be obtained at \$14, \$15, and \$16 per calendar month, owing to nearness to the school and conveniences afforded.

Students are permitted to select, from approved lists of boarding houses furnished, their own boarding places. Frequent changes for trivial causes are discouraged and students are expected to change boarding places only with the consent of the President of the School.

DISCIPLINE.

It is expected that those entering a school with the deliberate intention of preparing for the profession of the teacher are sufficiently mature

in character and in judgment to render espionage unnecessary. By far the greater number of students who come to the Normal are eager, earnest, and industrious young people, but experience has demonstrated the necessity of having certain well-defined regulations for the guidance of the few who, on account of immaturity of judgment, still need the direction of proper authority.

The discipline of the school is intended to appeal to the reason of the students. They are expected to be self-reliant and able to exercise self-restraint whenever necessary, and whenever a student proves unable or unwilling to do this, and the efforts of the Faculty to assist him in his character building have been disregarded, his guardian is requested to recall him from the school.

The purpose of the school is to train teachers of the young children of the State, and it should not send forth with license to teach those whose habits, morals, or influence would be unwholesome to children entrusted to their instruction.

Before leaving the city at any time during the session the student must file with the President a "Leave of Absence" card, stating the reason for such absence, the date of leaving, and the proposed date of returning.

When withdrawing from the school the student must file with the President a "Withdrawal Card," stating the cause of withdrawal. A student leaving without notice, forfeits his credits or rights as a student.

STUDENT PUBLICATIONS.

THE NORMAL JOURNAL, a monthly, and the YUCCA, an annual, are edited and published by the students. These publications afford excellent opportunities for exercises in composition, invention, and in decorative art.

STUDENT ORGANIZATIONS.

There are four literary societies in the Normal: two for young men, the Robt. E. Lee and the Reagan, and two for young women, the Mary Arden and the Current Literature Club. The purpose of these societies is to advance the social and literary attainments of their members. Parliamentary drills help to equip the boys for the duties of citizenship. Debating contests inspire self-confidence and sharpen all the faculties.

The two musical organizations—the Glee Club for young men and the Treble Clef Club for young women—are sources of much profit and pleasure to their members and to the entire school.

MORAL AND RELIGIOUS INFLUENCES.

The various church organizations are well represented at Denton by large congregations and well-arranged houses of worship. The pastors and members of these churches have extended a hearty welcome to the Normal students. Every Sunday School, Epworth League, Endeavor Society, or similar association among the young people, contains consecrated students in its membership. In several churches there are one or more Sunday school classes composed entirely of Normal students. It can, therefore, be safely asserted that the moral and spiritual atmosphere in and about the Normal is both wholesome and stimulating.

THE DEMAND FOR TEACHERS.

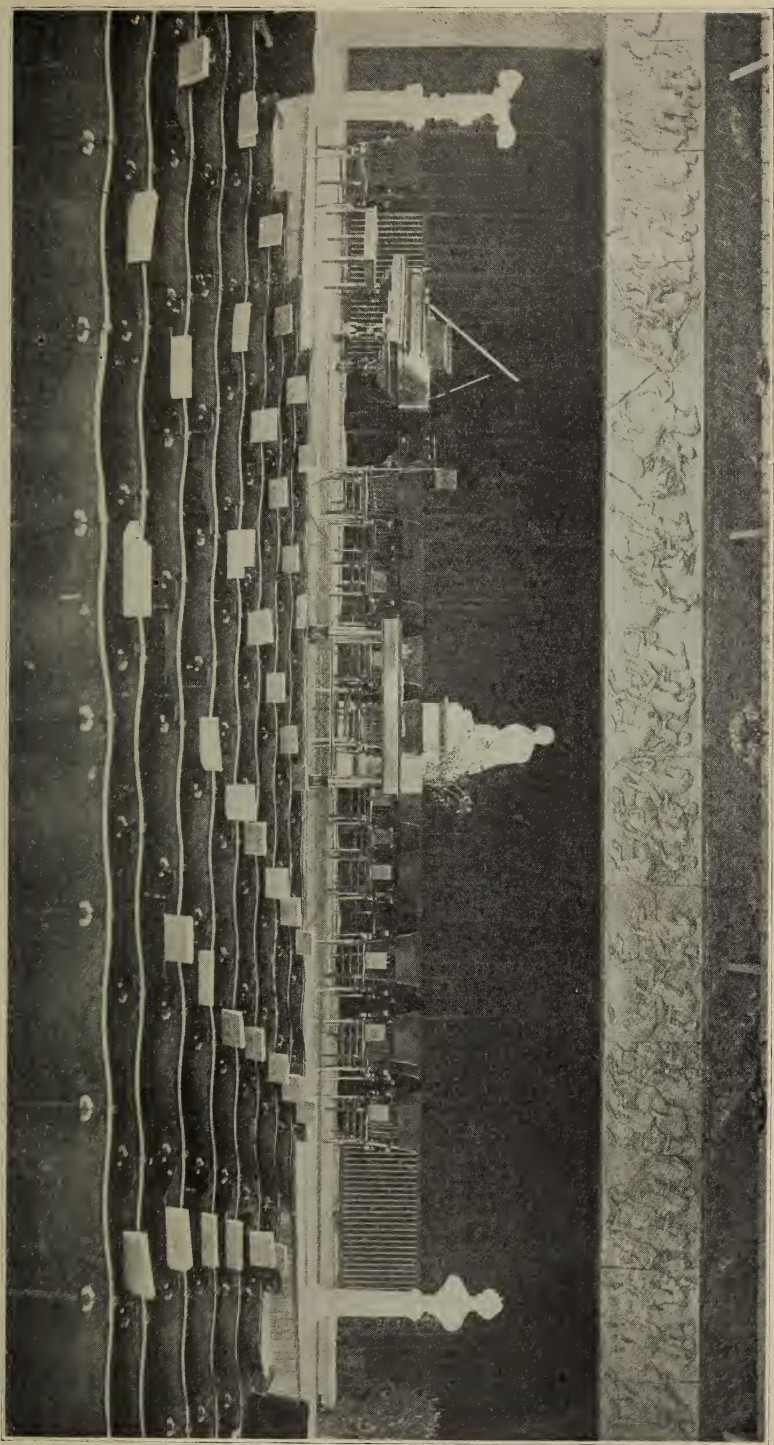

The demand in Texas for trained teachers has been steadily increasing for several years. During the past year applications have been made to the Normal for more teachers than could be supplied. Great care has been used in recommending to school boards only those who by their class room work have given evidence of ability and by their deportment and general bearing have inspired our confidence in the wholesomeness of their influence over children intrusted to their instruction.

There has been appointed from the Faculty a committee on teachers, to assist worthy students in securing employment, and to help school boards to find efficient teachers for their schools.

TO PROSPECTIVE STUDENTS.

To all teachers who are earnestly seeking for increased proficiency in their work and all young men and women who are sincere in their desire for broader culture before entering the ranks of the teacher, we extend a cordial welcome.

You should come expecting to work faithfully and earnestly, and to

FRONT VIEW OF AUDITORIUM.

make study your chief aim while here. If you are looking for diversion and recreation, change of scenery and associations, in order to pass the time pleasantly, do not come here. If you are leaving home simply to secure better advantages of society or to enlarge your circle of acquaintances, go elsewhere.

Do not be anxious to enter advanced classes, for which you are not prepared. Accept your classification cheerfully; it is reasonable to conclude that the Faculty, composed of teachers of long experience, know better than you where you can work most profitably to yourself. You should be glad to have the benefit of the advice of teachers who have devoted their lives to the work of educating the young.

A work that is done but once in a lifetime should be done well. Most of those who find the work difficult suffer from the lack of thoroughness in elementary training not previously discerned or even suspected.

POINTS TO BEAR IN MIND.

1. The session begins Wednesday, September 14, 1910.
2. Time to arrive in Denton: Tuesday, September 13, 1910.
3. Time to enroll in the Normal: Wednesday, September 14, 1910.
4. Electric cars run directly from the railway station to the Normal. Some member of the Faculty will meet each train arriving on Monday and Tuesday, September 12 and 13.

5. *Fees*.—Be prepared to pay your fees on the afternoon of Wednesday, September 14. The fees due at that time are Book Fee, for the entire session, \$5.00, and Incidental Fee, for the first term of twelve weeks, \$4.00; total, \$9.00.

6. *Admission*.—If you expect to be admitted to any class without examination, present for registration the credential upon which you claim exemption from examination on the day of your enrollment.

7. *Examinations*.—Entrance examinations will be held on Thursday, Friday, and Saturday of the opening week.

If you purpose attending the Normal during the session, it will be greatly to your advantage to enter at the opening. Delays are not necessary except in cases of sickness. Examinations for entrance given to students who enter later will be more rigid than those given at the opening, for the reason that the classes will have begun the different subjects and more difficult examinations will be necessary to show equality of advancement. Credentials which will admit students without examination at the opening will not necessarily admit them without examination after the opening.

SUMMER SESSION.

The Summer Session of the Normal begins each year about June 1st and closes during the last week of July. The Bulletin of the summer work will be issued in February of each year. The purpose of the Summer Session is to meet demand which can not be met during the regular session. There are in all parts of the country many men and women who, despite limited preparation, are doing good service in the cause of education. These teachers, barred by circumstances, it may be, from the advantages of college or training schools, desire, nevertheless, to broaden their scholarship from time to time and thereby increase their efficiency in school work. It is to this class the Summer Session largely appeals. During these eight weeks of careful, well-directed labor, much can be done to correct errors, to broaden the perspective and add to the teaching powers of the earnest teacher.

All the courses of the regular session are continued during the Summer Session. The student may take such work in the summer as he finds he can do under certain regulations, and such work is entered to his credit towards a certificate or diploma of the school.

At the close of the Summer Session examinations are conducted for "State Summer Normal Certificates," for credits on the regular courses of the school, and for entrance to the various classes of the regular session.

TEXT-BOOKS.

MATHEMATICS.—Arithmetic—*Sutton and Bruce*. Algebra—*Wells' New Higher*. Geometry—*Wentworth*. Trigonometry—*Wentworth*.

ENGLISH.—Grammar—*Buchler*; *Kimball's The English Sentence*; *Blanton's Review Outlines*. Composition—*Newcomer and Seward*; *Blanton's Outlines*.

LITERATURE.—*Halleck*.

BOTANY.—*Atkinson*.

PHYSIOLOGY.—*Colton*.

CHEMISTRY.—*McPherson and Henderson*.

PHYSICS.—*Millikan and Gale*.

CIVICS.—*Williams and Rogers*.

GEOGRAPHY.—*Maury*; *Davis*.

LATIN.—First Book—*Collar and Daniell*. Grammar—*Gildersleeve-Lodge*. Second Year Latin—*Allen and Greenough*; *Cicero*; *D'Ooge*. Virgil—*Frieze*. Latin Prose—*Ritchie*; *Daniell*.

GERMAN.—Beginner's, *Vos*. Grammar—*Joynes-Wesselhoeft*.

HISTORY.—United States, *Montgomery*. Texas—*Pennybacker*. General—*Myers*. Modern—*West*. English—*Andrews*.

PROFESSIONAL.—Methods—*Roark*. Management—*Seeley*. Psychology—*Roark; Halleck*. History of Education—*Seeley; Monroe*.

AGRICULTURE.—*Jackson and Dougherty*.

DRAWING.—*Prang System*.

MUSIC.—*Smith's Modern Music Series*.

READING.—*Emerson's Evolution of Expression*.

PROGRAM FOR OPENING SESSION 1910-11.

WEDNESDAY, SEPTEMBER, 14.

Forenoon.

Assembly in Auditorium, 10 o'clock.

1. Announcements.
2. Making out Entrance Cards.

Afternoon.

Payment of fees to Secretary in the office.

Registration in room 15 of credentials upon which is desired exemption from entrance examinations.

THURSDAY, SEPTEMBER 15.

Assembly in Auditorium, 8:30 a. m.

1. Announcement of students regularly admitted and of those to be examined.
2. Entrance examinations and organization of classes.

FRIDAY, SEPTEMBER 16.

Assembly in Auditorium, 8:30 a. m.

1. Announcements.
2. Entrance examinations and organization of classes.

SATURDAY, SEPTEMBER 17.

Assembly in Auditorium, 8:30 a. m.

1. Announcements.
2. Entrance examinations and organization of classes.

ENTRANCE EXAMINATIONS.

THURSDAY, SEPTEMBER 15.

Forenoon.

Examination for	{	Freshman—Arithmetic; Room 12, 9-11.
	{	Junior—Physiology; Room 15, 9-11.
	{	Senior—Algebra; Room 16, 9-11.

Afternoon.

Examination for	{	Freshman—English Grammar; Room 4, 2-3:30.
	{	Junior—United States History; Room 14, 2-3:30.
	{	Junior—Algebra; Room 16, 3:30-5.
	{	Senior—Physics; Room 7, 2-3:30.

FRIDAY, SEPTEMBER 16.

Forenoon.

Examination for	{	Freshman—Texas History; Room 17, 9-10:30.
	{	Junior—Composition; Room 10, 9-10:30.
	{	Senior—Civics; Room 16, 9-10:30.
	{	Senior—Grammar; Room 18, 11-12:30.

Afternoon.

Examination for	{	Junior—Grammar; Room 10, 2-3:30.
	{	Junior—Spelling; Room 12, 4-4:30.
	{	Senior—General History; Room 14, 2-3:30.

SATURDAY, SEPTEMBER 17.

Forenoon.

Examination for	{	Freshman—Spelling; Room 18, 9-10:30.
	{	Junior—Latin; Room 21, 9-10:30.
	{	Senior—Geometry; Room 16, 9-10:30.
	{	Senior—Latin; Room 21, 11-12:30.

Afternoon.

Examination for	{	Freshman—Geography; Room 17, 2-3:30.
	{	Junior—Arithmetic; Room 9, 2-3:30.
	{	Senior—Composition; Room 15, 2-3:30.
	{	Junior—Physical Geography; Room 17, 4-5.

ORGANIZATION OF CLASSES FOR REGULARLY ADMITTED STUDENTS.

THURSDAY, SEPTEMBER 15.

Forenoon, 9 o'clock.

Freshman—Grammar; Room 10, Miss Blanton.
Junior—Physics; Room 7, Mr. Borden.
Senior—English History; Room 14, Miss Mitchell.

Afternoon, 2 o'clock.

Freshman—United States History; Room 17, Mrs. Lewis.
Junior—Algebra; Room 15, Mr. Peters.
Senior—Agriculture; Room 20, Mr. Davis.

FRIDAY, SEPTEMBER 16.

Forenoon, 9 o'clock.

Freshman—Grammar; Room 4, Mr. Swenson.
Junior—Geometry; Room 16, Mr. Butler.
Senior—Chemistry; Room 7, Mr. Borden.

Afternoon, 2 o'clock.

Freshman—Latin; Room 21, Mr. McDonald.
Junior—Civics; Room 4, Mr. Swenson.
Senior—Solid Geometry; Room 16, Mr. Butler.

SATURDAY, SEPTEMBER 17.

Forenoon, 9 o'clock.

Freshman—Arithmetic; Room 15, Mr. Peters.
Junior—General History; Room 14, Miss Mitchell.
Senior—Literature; Room 18, Miss Clark.

Afternoon, 2 o'clock.

Freshman—Drawing; Room 22, Miss Hillyar.
Junior—Grammar; Room 10, Miss Blanton.
Senior—Methods; Room 12, Miss Moore.

TUESDAY, SEPTEMBER 20.

Assembly in Auditorium, 8:30 a. m.

1. Announcement of regular program.
2. Beginning of regular recitations.

ENROLLMENT, SUMMER SESSION, 1909.
